ORNAMENTAL EVERGREENS

# A Word About Our Nurseries

We have three principal nurseries, all in Massachusetts—one at Sudbury about 25 miles west of Boston, the others at Shelburne Falls and Colrain in the western part of the State. Visitors are always welcome.

The roots of evergreens will be balled and burlapped, if of sufficient size, while small transplants will be packed in damp moss. In either case they will stand shipment to any part of the country.

Stock not listed herein we will gladly procure on short notice, and shall be pleased to advise and quote prices on large or small orders.

Many shrubs and plants can be safely moved during the summer, but April, May and first of June for spring planting, and last of August, September and October for fall planting, are the best months for this work.

Contract planting of forest nursery stock has been our specialty for many years, and many thousands of growing timber trees received their first start under the protection of our guarantee, which we will gladly explain to those interested.

## Conditions

Prices on nursery stock given on the following pages are net, F. O. B. cars, except as noted, packing added at cost.

There will be no charge for packing when cash in full accompanies order.

Twenty-five at the hundred rate; 250 at the 1,000 rate, unless noted.

Lower prices on lots from 10,000 to 100,000 and up.

All stock is listed subject to prior sale.

We have larger sizes and various species other than those listed which we will gladly quote on application.

In the case of all sizes, we reserve the right to decline any order for a quantity too small to make shipment profitable.

The two white pines (strobis and flexilis) can be shipped anywhere in the New England states and New York.

## Planting Instructions

On arrival the trees should be "heeled in" at once in a moist, shady place by digging a trench, putting the bunches of trees in it in a vertical position, then throwing dirt over the roots and firmly tamping down with the feet.

If dry the roots should be dipped in a puddle of mud and water before being heeled in. After heeling in, water occasionally.

The planter must set the trees slightly deeper than they originally grew, and set them straight, plenty of fine dirt being placed about the roots and very firmly tamped down with the feet. The roots must not be allowed to become dry, even for a few minutes. In planting sod ground the sod should be taken off for about a foot square around the hole and not used again.

## Ornamental Stock with Ball of Earth

**Evergreens.** The trees should be set a trifle lower than they stood in the nursery. Dig the hole a foot larger than the diameter of the ball. Place good loamy soil in the bottom, set tree at proper height, and fill in with good soil, packing firmly by tramping, or settling by filling hole with water.

Burlap may be loosened at the top of ball and rolled back or cut off, but need not be entirely removed.

**Perennials** are best planted with trowel or hand spade. Remove badly injured or dried leaves. Trim long straggling roots, or bruised or damaged part. Plant so that roots spread out naturally. Plants with crowns should be set just below the surface of the ground.

## Have a Rock Garden

Every home should have a rock garden. It is the most interesting of all flower gardens. The perennials listed on pages 10, 11, 12 and 13 and marked with a star are especially suited to rock gardens.

**Many Perennials Are Adapted to the Rock Garden**

# ROSES

## Care in Planting

Roses require thorough cultivation of the soil and are gross feeders, necessitating rich ground or heavy fertilizing for best results. Plant all grafted joints at least three inches below ground level to prevent the strong root system of the rose stock from sending up shoots which will smother the budded top variety.

White Killarney

# Lilies, Lilium

To grow lilies successfully they should have a well drained soil, be planted six to eight inches deep, and a little sand around each bulb to keep from rotting. They should be grown three or four years and then transplanted, preferably in September, and set at once to prevent drying out. It is well to plant them among evergreens or plants with heavy foliage, and the beds covered with leaves or like protection during the winter.

Our bulbs can be supplied in September or October, or early spring.
